**1** Geyiklerin genellikle engebeli ormanlık araziye uygun uzun güçlü bacakları ve kıvrak, küçük gövdeleri vardır. Geyikler aynı zamanda mükemmel yüzücüdür. Alt çene dişlerinin üzerindeki yarım şeklide mineleri sayesinde oldukça farklı bitkileri çiğneyebilir. Geniş getirirler ve mideleri dört odacıklıdır.

**2** Korkarlar tehdit edildikleri durumda, kendilerine saldıran canlıyı önce bazı jestlerle uyarırlar. Eğer bu fayda etmezse arkalarını dönüp düşmanlarının yüzüne isabet alarak, pis kokulu bir sıvıyı püskürtürler. Şeritli korkarlar bu durumda iki elleri üzerinde durarak altı metre uzaklığa kadar püskürtürler.
